## OPERATING INSTRUCTIONS <br> FOR THE <br> ASTOR <br> MODEL <br> 904

You have purchased your "Astor" Radio because you admire its fine appcarance, because you like its thrilling performance, and because you realise that from every point of view it represents the greatest value for your money.

Because "Astor" Radio receivers are sold all over Australia and in many places overseas, a complete parts list and circuit diagram with views of the top and bottom of the receiver is included in this booklet.

This not only shows you just what you have bought, but supplies complete information for a serviceman in such rare cases where service is necessary.

A "Astor" Radio is never rendered useless by the discontinued production of that particular model, because "Astor" policy ensures that a complete range of spare parts is stocked for every radio that leaves the factory.

When ordering a replace ment, give the number and code letters of the receiver (stamped on the back of the chassis) or a description of the set itself, together with part number and name of part required.

## MODEL AS.".

19396 VALVE A.C. DUAL-WAVE CONSOLE RECEIVER. INTERMEDIATE FREQUENCY $-455 \mathrm{KC} / \mathrm{S}$.
all voltaces taken, with 1000 R PER VOLT METER, TO EARTH.NO SIGNAL.

## SUGGESTIONS For the efficient Operation of your ASTOR RADIO

## If Reception from your ASTOR RECEIVER fails, or proves unsatisfactory-

1. See that your earth wire is connected to proper terminal.
2. See that your aerial wire is connected to proper terminal.
3. See that set-plug is connected and set is switched on.

ABUSE.- Attempted adjustment or tampering by inexperienced persons. Hard, knocks, bumps, or falls.
If fault cannot be removed by attention to above, communicate with an authorised dealer.
